

# **METHOD, SYSTEM AND PROGRAM PRODUCT FOR PROCESSING A TRANSACTION**

## **ABSTRACT OF THE DISCLOSURE**

A method, system and program product for processing a transaction that requires multiple resources. The multiple resources for the transaction are concurrently prepared and/or committed. Further, a response can be sent to a requester before one or more of the resources has been committed. The resources can be prepared/committed using non-blocking function calls, using separate threads, or the like.
